Necessary CCE plan along with Random numbers required for conduct of Crop Cutting Experiments, allotment of supervision will be issued at District level by the Planning Department.

List of District / Crop/ Village wise Crop Cutting Experiments to be conducted (CCE Plan) is appended as **STATEMENT-I**.

5. PROCEDURE FOR LOSS ASSESSMENT & SETTLEMENT OF CLAIMS:

Yield based:

Calculation of Claims will be done, based on the Actual Yield (AY) and Threshold Yield (TY) of notified crop at each Insurance Unit. Actual Yield (AY) is calculated, based on the results of Crop Cutting Experiments. Threshold yield (TY) for a crop in a notified insurance unit is the average yield of best 5, out of past 7 seasons years multiplied by applicable indemnity level for that crop.

If 'Actual Yield' (AY) per Ha of insured crop for the insurance unit, falls short of specified 'Threshold Yield' (TY), all insured farmers growing that crop in the defined area are deemed to have suffered shortfall in yield of similar magnitude and the Government will provide coverage against such contingency.

'Claim' shall be calculated as per the following formula:

$$\frac{(\text{Threshold Yield} - \text{Actual Yield})}{\text{Threshold Yield}} \times \text{Sum Insured}$$

For all notified Crops, claims which are calculated above 1.5% of sum Insured (Franchise amount) will be paid.

Wherever the yield estimates reported at IU level are abnormally low or high vis-à-vis the general crop condition, the State Government will make use of satellite image data or other technologies to confirm the yield estimates and accordingly decision will be taken.

At the end of season, the Directorate of Economics and Statistics needs compile the yields recorded through CCEs, and to provide IU wise Threshold Yield and Actual Yield for all notified crops to the Department of Agriculture for processing of claims.

Post-harvest losses for Paddy Crop:

In case of occurrence of cyclone, cyclonic rains and unseasonal rains resulting in damage to harvested Paddy crop lying in the field in 'cut and spread' condition up to maximum period of two weeks (14 days) for sole purpose of drying, such Post-harvest losses will be covered on individual plot basis.

In the event of post-harvest loss, the Farmers need to give loss intimation to the concerned RythuBharosaKendram within 24 hrs of incidence. These intimations need to be surveyed at the Village level immediately by taking a minimum of 2 field photographs of each affected field depicting the degree of damage using Geo-coordinates. The Mandal level team should complete field inspection on top priority and submit report to District Administration duly indicating the Percentage of damage.

The District Administration should submit the report in full shape i.e., Mandal/Village/Individual wise final list of farmers along with the e-crop booking id and percentage of damage to reach the Crop Insurance Cell in Commissionerate of Agriculture within 96 hours of incidence. No supplementary list will be considered thereafter.

Proxy indicators: Rainfall data, other weather data, satellite imagery, supported by media report and field photographs.

If the claim based on the final yield estimates is more than the claims eligible under post-harvest losses, the difference in the claims will also be paid to affected farmers. If the final claim is less, no recovery will be applicable from individual affected farmers.
